

Battery Powered DIM Zigbee GP Switch

70100066

Important: Read All Instructions Prior to Installation

Function introduction

Product Data

| | |
|-----------------------|--------------------------------|
| Switch Type | DIM control |
| Transmission Range | 10-30m (typical) |
| Radio Frequency | 2.4GHz (Zigbee channels 11-26) |
| Power Supply | 3V(1xCR2430 battery) |
| Buttons | 4 |
| Dimensions | 44.9x106.2x19.2mm |
| Operating Temperature | -20 °C ~ +45 °C |
| Working Humidity | 10% ~ 95% RH non-condensing |
| Waterproof Grade | IP20 |
| Warranty | 5 years |

Product Description

The battery powered Zigbee GP switch is a wireless transmitter that communicates with a wide variety of Zigbee compatible systems. The switch uses a CR2430 battery that powers a built-in transmitter. This transmitter sends wireless radio signals that are used to remotely control a compatible system.

Compatible With

Zigbee Green Power (included in Zigbee 3.0)

Safety & Warnings

- This device contains a button lithium battery that shall be stored and disposed properly
- DO NOT expose the device to moisture.

Operations

Pairing GP Switch to a Compatible Zigbee Light Device(Easy Mode):

Step 1: Do wiring the Zigbee light device according to wiring diagram (please refer to the instruction of the light device that you would like to pair to)

Step 2: Click the "Prog." or "Reset" button on the light device 4 times continuously to set it into pairing to GP switch mode

Step 3: Choose a group that you would like to pair the light device to and click any of the 2 buttons of the group 4 times continuously, e.g. button ○ of group 1. LED lights connected with the device flicker twice means the light device is paired to group 1 successfully.

Note: one light device can be paired with max. 20 GP switches.

Delete Pairing to a Paired Zigbee Light Device(Easy Mode):

Step 1: Click the “Prog.” or “Reset” button on the light device 3 times continuously to set it into delete pairing to GP switch mode

Step 2: Choose the group that the light device paired to and click any of the 2 buttons of the group 4 times continuously, e.g. button ○ of group 1. LED lights connected with the device flicker 4 times means the pairing to group 1 is deleted successfully.

Pairing GP Switch to a Compatible Zigbee Light Device(Standard Mode):

Step 1: activate learning to GP switch mode of the compatible light device (generally our light devices will enter the mode by short pressing “prog.” or “reset” button 4 times, or by resetting power 4 times), please refer to the manual of corresponding light device.

Step 2: put the selected Group on the GP switch into learning mode.

2 Groups on the GP switch can be considered as 2 separate switches, they should be put into learning mode separately. To put a selected Group into learning mode, start by selecting one button of the selected group. (Use the same button for the entire sequence, pressing any other button will exit the learning mode.)

Next, execute the following sequence:

1. Press and hold the selected button for over 10 seconds, and then release it.
2. Short press the button once, and then release it.
3. Press and hold the button again for over 10 seconds, and then release it.

The selected Group has now entered learning mode.

Wait for approximate 1 second to check whether there is indication on the light device for successful pairing, generally our light device will blink twice to indicate successful pairing to the selected group.

Exit learning mode of the selected group by pressing any other button of it after pairing successfully. Just ignore step 3.

If there is no indication, please continue executing step 3.

Step 3: Cycle through the sixteen Zigbee channels

A radio signal needs be sent from the switch to the compatible light device on the correct Zigbee channel, the light device uses one of the sixteen possible channels, automatically set the device. Using the switch, a signal will be sent on each channel until the channel used by the light device is found.

Upon entering learning mode, the signal will be sent by the switch on default channel 11. Please refer to the following chart of the Zigbee channels and the corresponding radio frequencies (in MHZ).

| Channel ID | Lower Frequency | Center Frequency | Upper Frequency |
|------------|-----------------|------------------|-----------------|
| 11 | 2404 | 2405 | 2406 |
| 12 | 2409 | 2410 | 2411 |
| 13 | 2414 | 2415 | 2416 |
| 14 | 2419 | 2420 | 2421 |
| 15 | 2424 | 2425 | 2426 |
| 16 | 2429 | 2430 | 2431 |
| 17 | 2434 | 2435 | 2436 |
| 18 | 2439 | 2440 | 2441 |
| 19 | 2444 | 2445 | 2446 |
| 20 | 2449 | 2450 | 2451 |

| | | | |
|----|------|------|------|
| 21 | 2454 | 2455 | 2456 |
| 22 | 2459 | 2460 | 2461 |
| 23 | 2464 | 2465 | 2466 |
| 24 | 2469 | 2470 | 2471 |
| 25 | 2474 | 2475 | 2476 |
| 26 | 2479 | 2480 | 2481 |

If there is no indication on the light device for successful pairing, the signal sent by the switch is not on the correct channel, we need to change the switch’s channel.

To change the switch’s channel, short press the selected button to move from default channel 11 to the next one. For each such button press, the switch transmits on the next channel.

After each such button press, please wait for approximate 1 second to check whether there is indication on the light device for successful pairing.

If pairing successfully, please exit learning mode on the switch. If channel 26 has been reached, but there is still no indication, it might because the switch has not entered learning mode yet since the very start. We have to repeat the step 2 to put it into learning mode.

Delete Pairing to a Paired Zigbee Light Device(Standard Mode):

Step 1: activate delete learning to GP switch mode of the paired light device (generally our light devices will enter the mode by short pressing “prog.” or “reset” button 3 times, or by resetting power 3 times), please refer to the manual of corresponding light device.

Step 2: put the group that the light device paired to into learning mode.

To put the Group that the light device paired to into learning mode, start by selecting one button of the group. (Use the same button for the entire sequence, pressing any other button will exit the learning mode.)

Next, execute the following sequence:

1. Press and hold the selected button for over 10 seconds, and then release it.
2. Short press the button once, and then release it.
3. Press and hold the button again for over 10 seconds, and then release it

The group has now entered learning mode.

Wait for approximate 1 second to check whether there is indication on the light device to indicate that pairing is deleted, generally our light device will blink 4 times, which means the pairing is deleted successfully.

Exit learning mode of the group by pressing any other button of it after pairing deleted. Just ignore step 3. If there is no indication, please continue executing step 3.

Step 3: Cycle through the sixteen Zigbee channels

If there is no indication on the light device to indicate that pairing is deleted, the signal sent by the switch is not on the correct channel, we need to change the switch’s channel.

To change the switch’s channel, short press the selected button to move from default channel 11 to the next one. For each such button press, the switch transmits on the next channel.

After each such button press, please wait for approximate 1 second to check whether there is indication on the light device to indicate that pairing is deleted.

If pairing deleted successfully, please exit learning mode on the switch. If channel 26 has been reached, but there is still no indication, it might because the switch has not entered learning mode yet since the very start. We have to repeat the step 2 to put it into learning mode.

Signal Repeating Function of the Compatible Light Devices

The compatible light devices can repeat the received wireless signal from the switch, only when all light devices are added to the same Zigbee network can they repeat the received signal. There are 3 different situations as follows:

1. If you have a gateway controller and light devices, please add all light devices to the gateway first, then pair the GP switch to all light devices one by one.
2. If you have only light devices and battery/AC powered Zigbee remote, please set up a Zigbee network using the light devices and Zigbee remote, then pair the GP switch to all light devices one by one.
3. If you only have light devices, please use a light device to set up a Zigbee network first, then add other light devices to the network (please refer to the light device manual), then pair the GP switch to other light devices one by one.

Installation
