With NFC Programming devices

## Note

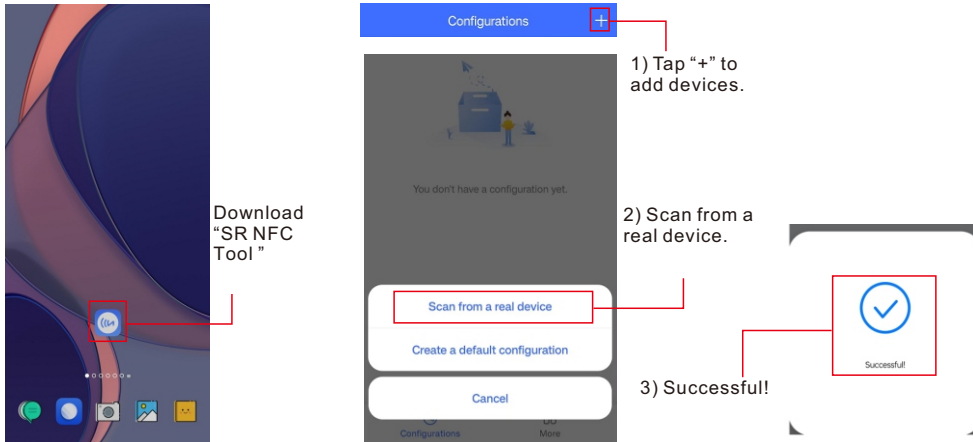

1) Do wiring according to the wiring diagram .

2) Recommend setting parameters without power-on devices .

2) Please make sure your mobile phone has NFC function and enable it .

## Working with “SR NFC Tool” APP

Step 1: Download the APP (searching “SR NFC Tool” from App Store and Google Playstore) .  
Then open the APP .

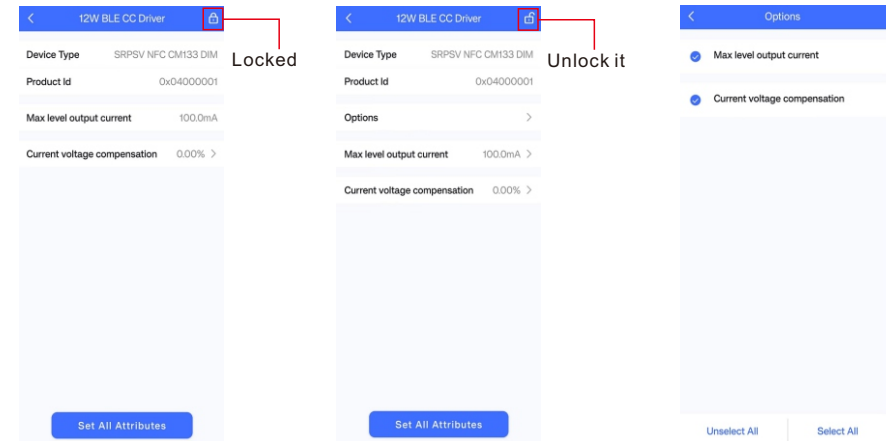

**Note:** 1. Please Make sure that you have enabled NFC function with your mobile phone/ tablet .  
2. Please Make sure that the “NFC position” is matched.  
3. Please do not power on the device before setting.  
4. If you can't download “SR NFC Tool”. Please contact with us.

Step 2: Add device, and name it as you wish.

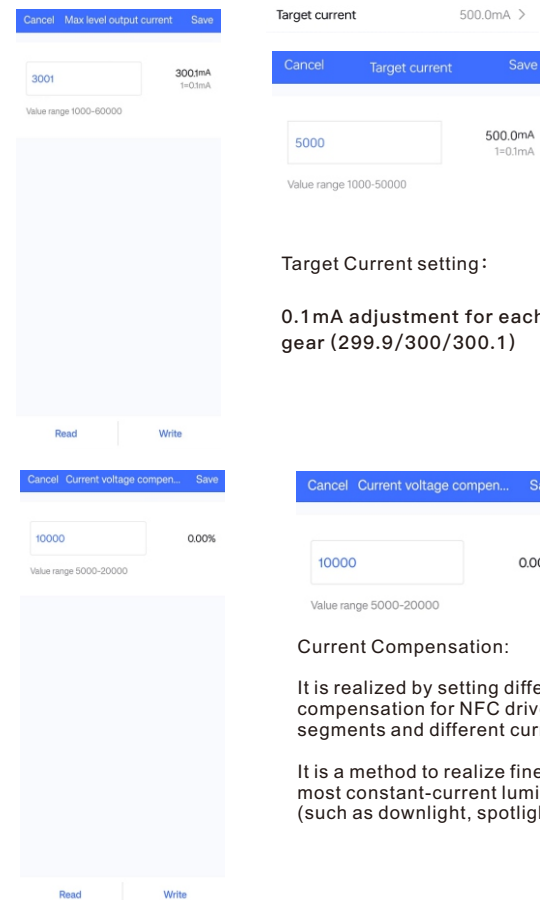

Step 3: Unlock device, enter parameters configuring page.

**Note:** 1. You have to unlock the device then do some settings  
2. Only when the corresponding function is selected, the function interface will be displayed.

Step 4: Few parameter interface, you can choose the setting based on your requirements.

Target Current setting:

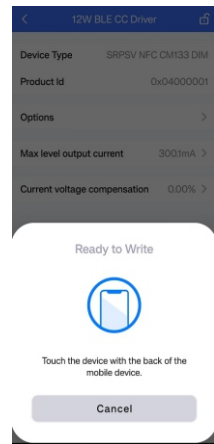

0.1mA adjustment for each current gear (299.9/300/300.1)

Current Compensation:

It is realized by setting different levels of current compensation for NFC drivers in different power segments and different currents of the driver.

It is a method to realize fine lighting control for most constant-current luminaries in the market (such as downlight, spotlight, panel light, etc.).

**Step 5: After setting, please save the selected configuration via NFC and power on the device.**

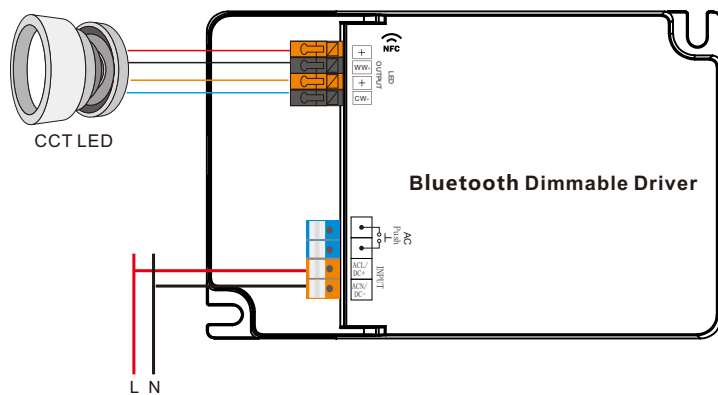

### Tips

1. NFC function doesn't require any power driver.
2. Many functions can be configured by NFC. Kindly check your desired functions.
3. You can create a default profile with the "+" button.

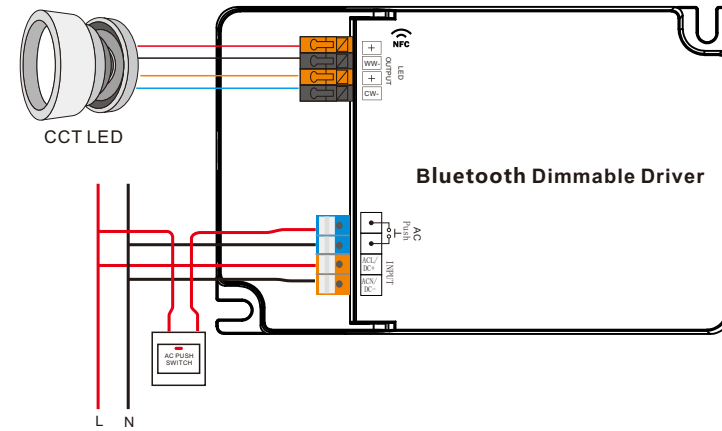

### Wiring Diagram

#### Application 1 (Without PUSH)

Note: Available with 3-wire CCT luminaries as well

#### Application 2 (With PUSH)

### AC Push Function

- 1) Click the button to switch ON/OFF
- 2) Press and hold down the button to increase or decrease light intensity to desired level and release it, then repeat the operation to adjust light intensity to opposite direction. The dimming range is from 1% to 100%.

- Note:
- 1.Those MCB parameters are based on ABB S200 series circuit breakers.
  - 2.For different brands and models of miniature circuit breakers, the quantity of drivers will have difference.
  - 3.Please do not exceed the above-mentioned quantity during on-site installation, and the specific load quantity shall be subject to on-site installation.
  - 4.When the installation environment temperature of MCBs exceeds 30°C or when multiple MCBs are installed side by side, the number of mounted drives will be reduced, which requires recalculation.
  - 5.Type C MCB's are strongly recommended to use with LED lighting
